**Enhance Your Legal Practice with Verus's**
# Data Analytics Solutions

# \\Verus

Verus offers a full range of mass tort support services throughout the litigation lifecycle. We collaborate closely with your law firm to provide case management solutions that are tailored to your needs. Our extensive experience in end-to-end mass tort litigation support ensures efficient and cost-effective claimant engagement, data collection, and analysis. Our data analytics solutions deliver the insights that help you plot your litigation and settlement strategy.

## ■ Operational Analytics

Our data scientists and operational experts work together to identify improvement opportunities for your practice.

- Reveal patterns that help refine your outreach to find more viable cases

- Spot non-viable cases early to reduce management costs

- Identify improvement opportunities in client onboarding related processes

- Elevate client experience with personalized communication delivered at the right time.  Foster trust and expedite case resolutions for increased client loyalty.

- Optimize allocation of your internal staff

## ■ Allocation Modeling

Custom compensation models to provide recommended settlement values for cases

- Adaptive models that optimize recommended settlement values as more data becomes available.

- Dynamic data visualization, making complex valuation data easily digestible and actionable for your entire portfolio.

## ■ Liability Forecasting:

Predictive models to estimate the potential future values of claims for a mass tort. See how your portfolio fits within the universe of potential claims.

- Quantify potentially exposed populations and identify where they are likely to be found

- Estimate total current and future settlement value and administrative costs for claim portfolios

- Segment the universe of claims by injury type and other parameters

- Compare actual results to forecasts to adapt models and enhance settlement strategies
