

Turning Challenges into Results With Verus' Case Management

From lead generation to claimant intake, medical record review and lien resolution, Verus delivers an end-to-end litigation solution package that is designed to enable law firms engaged in mass torts and class actions to focus on their litigation strategy while Verus manages the details behind the scenes. Combined with a proprietary case management technology platform Verus provides the infrastructure, efficiency, and workflow your firm needs to manage mass torts and class actions confidently and effectively.

Common Pain Points

Expensive Lead Generation

Costly and inefficient lead generation

Complex & Costly Case Intake

Inconsistent onboarding data wastes time and budget

Inefficient Medical Record Retrieval

Slow ordering and unclear provider fees disrupt timelines

Low Claimant Engagement

Inactive claimants delay resolution

Inconsistent Data & Missing Documents

Lost forms and compliance gaps cause costly setbacks

Healthcare Lien Complications

Unresolved liens delay distributions

Document Overload & Data Gaps

Large volumes of records can cause potential errors.

Lack of Portfolio Visibility

Without analytics, planning feels like guesswork

Submission Errors

Mistakes and misdirected requests waste time and money

Verus Solution

Data driven lead generation delivers quality, pre-verified leads that meet case criteria

Customized data portals standardize intake and identify ineligible claims early, ensuring real results.

Transparent record retrieval processes deliver speed, cost visibility, and efficiency.

Omni-channel engagement keeps claimants informed and responsive from start to finish.

Secure portals centralize data, documents, and e-signatures, keeping everything organized and compliant.

Early identification and pro-active resolution plans protect client recoveries.

Verus blends technology and expert review to ensure accuracy, completeness, and actionable insights.

Predictive modeling gives firms clarity to forecast outcomes and allocate resources strategically.

Automation, rigorous QC, and verified data sources reduce deficiencies and control provider spend.
