

# Accelerate Settlements with Proactive Lien Resolution

When settlements or verdicts are reached in large-scale litigation, outstanding healthcare liens can delay payouts, reduce recoveries and add administrative burden. Identifying, negotiating and resolving these often-hidden obligations is critical for optimizing client results and law-firm efficiency.

Verus' lien resolution increases your negotiating power and accelerates resolution timelines.

## Your Partner in Expediting Recovery and Reducing Risk

### Early Identification

We proactively search for and flag potential lien-holders at or near the onset of each claim, giving you full visibility ahead of settlement.

### Specialist Negotiation

Our team of seasoned lien-resolution professionals steps in handling communications, negotiations and documentation with providers, payors and other lien-holders.

### Bulk Leverage

By grouping liens across multiple claims and portfolios, we enhance your negotiating power—reducing cost and delay and increasing the net recovery for your clients.

### Seamless Integration

Our lien-resolution service is part of our mass tort case-management ecosystem, so your firm can stay focused on client strategy while we manage the operational details.

### Benefits to your Firm and Clients

- Proper lien resolution is not optional; it is essential to compliance.
- Reduced administrative burden—lower internal costs mean every dollar saved in lien negotiation is a dollar returned to your client.
- Reduced risk of missed or invalid liens mean stronger settlement outcomes.
- Efficiently navigate the complexities of Section 111 reporting and lien resolution.

## WHY VERUS

- Decades of experience in complex litigation management and settlement administration
- Managed over 8.7 Million claims
- Data analysis expertise provides insights to forecast and optimize outcomes
- Proprietary software platform designed with efficiency and adaptability in mind
- Distributed over \$8 Billion dollars in claims awards
- SOC 1 certified service organization
